Project Name	FitBuddy – AI Fitness Plan Generator

Sample Project Documentation

Project Title: FitBuddy – AI Fitness Plan Generator

Project Summary

FitBuddy is an AI-powered web application that generates a personalized seven-day workout plan from a user's basic fitness profile. It also provides a concise nutrition/recovery tip and allows the user to submit feedback so the plan can be revised.

Problem

Many users rely on generic routines or spend time manually searching and organizing exercises. They may also need to modify routines when their preferences change.

Solution

FitBuddy uses FastAPI for the web application, Gemini for generative fitness content, SQLite/SQLAlchemy for persistence and Jinja2 templates for the interface.

Inputs

User ID, name, age, weight, fitness goal and workout intensity; later, free-text feedback for plan revision.

Outputs

Structured 7-day workout plan, nutrition/recovery tip, revised workout plan after feedback and an authenticated admin view of stored records.

Limitations

The system is a prototype and generated fitness guidance should not be treated as medical advice. Production deployment would require stronger authentication, validation, privacy controls, monitoring and scalable infrastructure.
